A HAPPY ANNOUNCEMENT TO OUR CUSTOMERS AND FRIENDS

HERE IS THE FIRST ISSUE OF OUR COMPLETE WHOLESALE SEED CATALOG

Many of you know the history of our nurseries. You remember our small four page circular from which you selected perennials in the most ordinary varieties. Year by year you found the quality satisfactory. On the basis of supplying you with quality material, you continued favoring us with your orders. Each year you received a wholesale catalog listing a larger assortment of perennials, quality maintained. Your continued patronage made this possible.

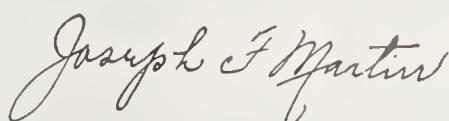

By keeping in close touch with our customers, we find that a very large percent are florists. While you were purchasing plant material from us, you had to arrange with other sources for your requirements of seeds. In this, our first wholesale seed catalog to florists, you will find offered a most complete list of annual and perennial seeds.

Our seed department is under the management of Mr. P. C. Pratt, who has had long experience in flower seeds and knows the problems of the florist. He has arranged with the most reliable sources for the highest quality flower seeds obtainable. At the same time you will find our prices in line with reputable seed concerns.

You, being a customer of ours for many years, know that we are very careful with the production and handling of our plant material. This same exactness will prevail in our seed department. We will most sincerely appreciate your kindness for placing with us your orders for your requirements of seeds and trust that we will have the pleasure of continuously serving you.

Sincerely yours,

THE JOSEPH F. MARTIN CO.

Asters

Wilt Resistant and Standard Strains

We have gone to Aster headquarters for our seed and offer these strains to you with complete confidence in their ability to produce well for you. Wherever it was available we are listing the Wilt Resistant strain of each color and variety. In other words, we have reached the conclusion that the Wilt Resistant strains are superior to the Standards and are listing the Standards only when the Wilt Resistant is not yet perfected in that certain color or type. The prices on Wilt Resistants are a little higher, true, but certainly not enough to justify your failing to try them.

Annual Larkspur

Martin's Excellent Strains for the Florist

Many florists are finding Annual Larkspurs profitable greenhouse crops. They are easy to grow, the seed is inexpensive and the crop is made in a comparatively short time. Sowings of seed in the greenhouse during December and January will give excellent crops during late April and May. Sow the outdoor crop as early as your soil is in workable condition.

Our Mr. Pratt, while on a recent visit to the seed production fields in California, had an excellent opportunity to check the many varieties and to pick out the best colors and varieties.

Pansies

Martin's Excellent Strains

The following are what we believe to be the finest Pansy strains produced today. We are constantly trying out new creations to find out definitely which are the best and have over fifty strains growing for trial at the present time.

Martin's Brilliant Mixture

This mixture contains the widest range of colors and more rare shades of color than any other strain of Pansy that we have every seen. All combinations are present in solid colors, blotched, faced and bordered. The flowers are all of great size, of good substance and most are prettily frilled. Under favorable conditions the flowers reach a diameter of 4 inches or more. The plants are compact, yet of good strong growth bearing long stems. Tr. Excellent for greenhouse growing as well as for outdoor plantings. The flowers are carried well above the foliage. Rich bronze, crimson, mahogany shades and blues predominate. Tr. Starting Petunia Seed

Your soil must be very fine and contain plenty of sand. Moisten the soil and press the seed in but do not cover with soil. Water very carefully. It is best to use soil that has been treated to prevent "damping off". The finer strains of Petunias must be pampered a bit if you want good plants later on. Never allow the soil to dry out or crust on the surface.

GAIETY—Note the habit of this type.

Verbena, Giant Flowered, Royale

Compacta Erecta Verbenas

A comparatively new class in which the plants, instead of semi-trailing, are dwarf and bushy. They are, therefore, better adapted to bordering or formal bedding. The varieties are not all alike in height or habit as some are taller than others. We do not offer these as a mixture, therefore.

Cameo Pink. A lovely shade, plants real dwarf and compact and coming quite true from seed. $\frac{1}{16}$ oz. 30c, $\frac{1}{8}$ oz. 55c, $\frac{1}{4}$ oz. \$1.00, oz. \$3.00.

Garnet. Good true stock. A little taller than Fireball but compact. Purple with white eye. $\frac{1}{16}$ oz. 25c, $\frac{1}{8}$ oz. 40c, $\frac{1}{4}$ oz. 75c, oz. \$2.25.

Lemon Verbena (Aloysia) Citriodora. Fragrant, for potting. $\frac{1}{16}$ oz. 30c, $\frac{1}{8}$ oz. 55c, $\frac{1}{4}$ oz. \$1.00.

Our Trollius seed was gathered from our nurseries during the past summer and, of course, is the freshest available. If you have not already started your seed and if you have a greenhouse follow this treatment: Get your seed at once, sow it shallow in flats and set the flats outdoors until the seeds have been well frozen, say until February. Then you can bring into the greenhouse under temperature of 45 to 55 degrees. The soil will gradually thaw out and the seedlings should be plenty of moisture in the soil to germinate the seed. Move into pots and keep the plants growing.

Cannas for the Florist

You, no doubt, can recall years ago when Cannas were one of the principle items used for bedding purposes. In spring seasons there were immense quantities sold both in the dry root form and later on in 3 inch pots. In recent years the demand again became very lively for good Cannas and they are now very popular for bedding purposes.

There are many things that can be said in favor of Cannas. After planting, they will make a very quick growth and start flowering in the month of July, continuing until cut down by frosts. After a few freezings, they can be dug, placed in a dry basement and held over until the following spring.

We have selected a short list of desirable varieties, fully covering the color range. These will be ready for shipment any time throughout the winter. If you sell bedding plants, you can purchase these roots from us, pot them into 3 inch pots and develop nice plants. When grown this way, they command a good retail price. By having them in pots, you can also extend your spring selling season, including the month of June. We believe that you will find the Cannas a worthy addition to your list of bedding plants.

Our Canna roots are grown by an expert under the proper condition to produce the very best quality.

Dahlias

We are in close touch with the Cleveland cut flower market and before listing just Dahlias for cutting purposes, we checked up on the varieties that actually sell as cut flowers, even at times when the markets are overloaded. We have consulted our flower dealers and according to their recommendations, we have arranged to list the following. Their statement is that these varieties sell regardless of the quantity of Dahlias available.

Our Dahlia roots are grown by a specialist who understands the production of the Dahlia in order to produce clumps from which good strong well-eyed divisions can be made.
